# DERMAPLANING

## DERMAPLANING

Dermaplaning is a safe procedure for exfoliating the epidermis and ridding the skin of fine vellus hair (peach fuzz) and it will not grow back thicker or darker.

Gentler than dermabrasion and with no adverse affects, the technician uses a medical grade tool to gently abrade the surface of the skin using light strokes.

Dermaplaning can be offered to clients who are pregnant as no peeling agents are used and removing epidermal skin allows products to penetrate more readily into the deeper skin layers.

Also suitable for clients with rough, dry skin or superficial hyper-pigmentation and acne scarring; this leaves the skin smooth and glowing.
